

# Procedure: Dab Equipment And How To Dab

## Dab Equipment

<b>Banger</b>	Flat-bottomed, square-necked dab rig nail
<b>Carb cap</b>	A type of dome that contains vapor and restricts air flow
<b>Dab rig</b>	Special water pipe designed for dabbing concentrates
<b>Dab tool (aka dabber)</b>	Used to pick up concentrate and apply it to a heated nail
<b>Dome</b>	Glass hood that contains the vapor in a dab rig
<b>Nail</b>	Part of a dab rig that is heated and vaporizes the concentrate
<b>Quartz insert</b>	Provides an extra surface to improve low-temperature dabs and protect the dab rig from becoming hazy or breaking
<b>Reverse tweezers</b>	Dab tool used to pick up hot dab rig parts
<b>Terp pearls</b>	Accessory used to evenly distribute the concentrate

---

## Procedure

**WARNING! Nails and domes become extremely hot while dabbing. After dabbing, wait for all pieces of your dab rig to cool off before you touch them again.**

1

Set up the dab rig and open the concentrate container.

2

Heat the nail or banger until it starts to glow red or orange.

- If you're using an electric nail, turn it on and wait until it heats up.
- If you're using a torch, turn it on and aim the flame directly at the nail until it's red hot (around 20-60 seconds, depending on your torch).

After the nail or banger has been heated, you can place a dome over it.

3

Use the dab tool to apply a small amount of concentrate directly to the nail or banger.

4

Inhale slowly. Rotate the dab tool on the nail to vaporize all the concentrate that's stuck to it.

5

Enjoy!
